

Central question

A

Evidence hierarchy

B

Dataset taxonomy and independence

C

Dataset	Evidence role	Cancer/model context	Compartment
GSE76068	Discovery	ccRCC PDX	tumor / stroma
GSE73571	Discovery	HCC xenograft	tumor
GSE180687	Discovery	Ovarian xenograft	endothelial
GSE64472	Discovery	NSCLC xenograft	mouse stroma
GSE26644	Discovery	NSCLC xenograft	tumor / stroma
GSE81465	Val. support	GBM xenograft	tumor
GSE64052	Validation	RCC xenograft	tumor
GSE86525	Validation	CRC xenograft	tumor
GSE45161	Val. support	GBM xenograft	tumor
GSE79671	Human long.	Recurrent GBM	bulk tumor
GSE37138	Baseline support	NSCLC biopsy	baseline tumor

Contrasts sharing a GEO dataset/system are displayed as nested evidence.

Analysis strategy

D

Hallmark primary · Reactome supporting · no pathway reselection

Discovery ≠ validation ≠ human longitudinal
≠ baseline association

Evidence hierarchy; contrast counts are not independent-study counts
